Bhimavaram, Andhra Pradesh, India

Machine Learning undergraduate with hands-on experience building and deploying ML-integrated applications: retrieval pipelines, semantic search, and LLM-based agents in production. Strong foundation in Python and applied ML (DeepLearning.AI ML Specialization; SVM, kernels, LDA), with a fast-learning track record picking up new technical domains independently – currently extending this into geospatial ML and remote-sensing tooling.

EDUCATION

SRKR Engineering College

B.Tech in Artificial Intelligence & Machine Learning; CGPA: 9.32/10

Bhimavaram, India

Expected 2028

TECHNICAL SKILLS

Machine Learning: Python, scikit-learn, SVM/kernel methods, embeddings & vector search, model evaluation

AI/LLM: LangChain, LangGraph, RAG pipelines (chunking, embedding, hybrid/semantic retrieval), Prompt Engineering

Data & Backend: REST API Development, FastAPI, Node.js, MongoDB, MySQL, PostgreSQL

Frontend: React.js, HTML5, CSS3, JavaScript (ES6+)

Languages: Python, JavaScript, Java, C

Tools & Cloud: Git, GitHub, Docker, Postman, Render, Vercel

LEADERSHIP EXPERIENCE

Team Lead

EcoLearn – Smart India Hackathon (SIH) 2025

September 2025

Remote

- Led a team of engineers in a time-bound hackathon, coordinating Git/GitHub workflow and task division to ship a gamified environmental-education platform end to end as a functional MVP

PROJECTS

RAG PDF Question Answering System | *LangChain, ChromaDB, FastAPI, React.js*

GitHub

- Built a retrieval-augmented generation system enabling natural-language queries over uploaded documents
- Designed a chunking and embedding pipeline with ChromaDB for semantic vector search, a core pattern directly transferable to indexing and querying large geospatial/imagery datasets
- Returned answers with inline source citations to improve traceability and reduce hallucination

AI Travel Agent | *Python, LangGraph, LangChain, Gemini API, Node.js/Express, PostgreSQL* Live Demo | GitHub

- Used LangGraph and prompt engineering to build a conversational agent solo, iterating from a naive ReAct loop to a deterministic, tool-calling pipeline that cut redundant LLM calls
- Engineered a tool layer with coordinate/location resolution against a custom API for accurate, geography-aware itinerary generation
- Implemented JWT-based authentication and a PostgreSQL-backed persistence layer, both verified working in production

EcoLearn (SIH 2025) | *React.js, Node.js, Express.js, MongoDB, Gemini API*

Live Demo | GitHub

- Built and shipped a gamified environmental-education platform (student/teacher/school logins, Gemini-powered chatbot, auto-generated quizzes, points/leaderboard) end to end under hackathon time pressure

CERTIFICATIONS

Machine Learning Specialization – DeepLearning.AI / Coursera

NPTEL – Programming, Data Structures and Algorithms using Python (March 2025)

LangChain for LLM Application Development – LangChain Academy

Introduction to LangGraph – LangChain Academy
